

TECHNICAL CHARACTERISTICS

First spray powered by air in our range. Solvents and gases free, therefore neutral for the global warming.

Its unique sustainable compressed air process, taken from the "Volcans d'Auvergne" region in France, allows a continuous diffusion flow of our **waterproofer PROTECTOR**, by pushing on the top button, like any spray.

This exclusive propulsion mix **comfort** of use and diffusion **delicacy**, avoiding wetting or damaging the treated supports. This allows a greater effectiveness of the treatment.

The **Protector** (aqueous base) and its solvent-free formula, with no dangerous classification, protects your health and the environment. Its use can be carried out in poorly ventilated places without inconvenience.

Its formula is not packaged and mixed with any liquefied gas, it only contains active product. Therefore, when buying the 200 ml **Protector** spray, you have 200 ml of the active product. The **Protector** is a very economical concentrated product.

Protects against: rain, snow, mud and stains of all kinds: grease, drinks, etc. Also works against the dirt penetration.

APPLICATION FIELDS

All leathers: smooth leather, suede, textiles, TEX & synthetic materials

CARE INSTRUCTIONS

1. Brush the article to remove dust
2. Shake the spray
3. Spray the article evenly at 20 cm without wetting it
